

23 $a = \frac{2x+5}{1-x} \quad x = \frac{5-2y}{3y}$

Write a in the form $\frac{m+ny}{p(y-1)}$ where m , n and p are integers.

Show your working clearly.

$$\frac{2 \left(\frac{5-2y}{3y} \right) + 5}{1 - \left(\frac{5-2y}{3y} \right)}$$

$$\frac{10 - 4y + 5}{6y}$$

$a =$
