

- 1 A logo design app displays a circular emblem in which quadrilateral $ABCD$ is inscribed, with vertices in order around the circle. The side DC is extended to an external point E , so that BCE is a straight-line exterior angle at C .

Angle $DAB = 118^\circ$.

Find the size of angle BCE , marked x on the diagram, giving full geometric reasons for your method.
 $x = \dots\dots\dots^\circ$
