

10 (a) Write down all the factors of 18.

1, 2, 3, 6, 9, 18 [2]

(b) Factorise.

$$3y - xy + 15 - 5x$$

$$= y(3 - x) + 5(3 - x)$$

$$= (3 - x)(y + 5)$$

$$(3 - x)(y + 5) \dots \dots \dots [2]$$

(c) $3y - xy + 15 - 5x = 18$

where x and y are positive integers.

Using your answers to **part (a)** and **part (b)**, find one possible value of x and the corresponding value of y .

$$(3 - x)(y + 5) = 18$$

$$x = \dots \dots \dots, y = \dots \dots \dots [2]$$

- 11 A warehouse has a floor area of 800 m^2 .
The plan of the warehouse is drawn to a scale of 1 : 50.

Calculate the floor area on the plan.

Give your answer in square centimetres.

$$1 : 50$$

$$800 : x$$

$$x = 40000 \text{ m}^2$$

$$40000 \times 10^{-8} \dots \dots \dots \text{cm}^2 [3]$$
